**NEW LED LIGHTING IN ELEMENTARY SCHOOL PARKING LOT** - Just in time for daylight savings, daylight lasts longer at Eugene Field Elementary School with Sunshine Systems' LED street lights.

Wheeling, IL – Community Consolidated School District # 21 (CCSD#21) and Sunshine Systems, LLC, a Wheeling, IL based LED lighting manufacturer and distributor, partner to overhaul and upgrade Eugene Elementary School's parking lot.

The school was using outdated and inefficient HPS (high pressure sodium) lighting that required yearly maintenance. Objects appearing under the HPS lights were poorly illuminated and wasted energy; consuming almost 400w per fixture.

Eugene Fields Elementary School replaced their existing HPS parking lot lights with nine LED street lights from Sunshine Systems. The newly installed LED lights operate maintenance free for six years, provide a quality of light that is best compared to natural daylight and use just 112 watts per fixture.

Quality of light, energy efficiency and reduced maintenance costs were a large incentive for the school district's decision for the retrofit.

Many state and local agencies are now offering energy efficiency rebate programs resulting in massive incentives for retrofits and new construction projects. Sunshine Systems can assist customers with finding and utilizing these programs.

Headquartered in Wheeling, IL, Sunshine Systems is a leading manufacturer and distributor of LED lighting solutions for the commercial, horticulture, aquatics and hobby industries.

For more information on how you can benefit from our LED lighting solutions, or questions about grants and incentives, please call Sunshine Systems toll free at 866-576-5868 or email Meredith Solomon, Director of Business Development, at [msolomon@sunshine-systems.com](mailto:msolomon@sunshine-systems.com).
